

Task 3: Develop a C program using `fork()` that creates a parent and child process. Display the Process ID (PID), Parent Process ID (PPID), and process states at different stages of execution.

Flow Chart

Flowchart 1: C Program Using fork()

Task 4: Design an experiment to observe process state transitions (Ready, Running, Waiting, Terminated) using Linux monitoring tools such as ps, top, and /proc. Document the observations.

Flow Chart:

Flowchart 2: Experiment to Observe Process State Transitions
